

Minimum Expectations

The Surgical Technology Program aims to incorporate civic values of service, dignity, equality, and appreciation for every individual, establishing minimum expectations for ethical conduct in education. The program strives for academic excellence while promoting professional and personal growth through further education and a commitment to lifelong learning. It provides a student-centered academic environment that encourages holistic growth and development while maintaining compliance with accreditation standards regarding diversity, student qualifications, retention, and recruitment. Additionally, the program meets community needs for surgical technologists, preparing students to be competent entry-level professionals. The program must have the following minimum expectations statement: “To prepare entry-level Surgical Technologists who are competent in the cognitive (knowledge), psychomotor (skills), and affective (behavior) learning domains to enter the profession.” Furthermore, it adheres to minimum expectations in all facets of training. To optimize resources and keep pace with the rapidly changing technologies in the surgical environment, the program ensures it remains current and effectively equipped for future challenges.
